HŌʻIKE EXPLORER

Unhiding the hidden curriculum so local futures in Hawaiʻi feel reachable.

This lightweight MVP shows how Hōʻike translates schoolwork into local pathways, introduces students to real professionals, and gives them safer next steps than generic "go network" advice.

Generate new handle

PRIVACY MODEL

Pseudonymous by default

Visible to professionals as a handle, resolvable by staff only if needed.

HOW THE DEMO WORKS

1. Select a sample assignment.
2. See the Professional Why and Hawaiʻi pathway matches.
3. Browse Local Voices and try the guided question flow.
4. Choose one small next step.

STEP 1

Pick a school task

Hōʻike starts where students already are instead of asking them to go find opportunity on their own.

Algebra for Solar Design

Use slope, area, and cost assumptions to compare rooftop solar layouts.

Algebra II

Marine Biology Data Lab

Interpret reef health indicators and propose a monitoring plan.

Biology

Digital Storytelling for Public Information

Create a short campaign explaining a community issue to a public audience.

English / Digital Media

STEP 2

Professional Why

Math becomes resilience planning.

This assignment is not only about formulas. In Hawai‘i, algebra shows up in solar layout planning, battery sizing, energy auditing, and the cost models that shape household and community resilience projects.

STEP 3

Hawai‘i Pathway Match

PATHWAY

Clean Energy Planner

Fit: High fit for math, design, and resilience-minded students

Local value: Supports household savings, grid resilience, and local energy independence.

When students can explain where the math lives outside class, the work starts to feel like preparation instead of abstraction.

- Compare two school buildings and sketch where solar exposure would change the design.

PATHWAY

Construction Technology

Fit: Strong fit for students who like applied problem-solving
Local value: Connects classroom math to local building, retrofitting, and infrastructure work.

- Ask a teacher which local trades or design roles use estimating and measurement every week.

PATHWAY

Operations and Data Roles

Fit: Good fit for students who prefer systems and logistics
Local value: Supports project coordination, energy operations, and public utility planning.

- Track the variables that would change the cost of a small solar project on your island.

STEP 4

Local Voices

A protected, school-safe LinkedIn vibe: local professionals share short intros, pathway context, and what students can try now.

MAUI 52S

Leilani Cruz

Clean Energy Planner

I work on projects that help schools and communities think about solar, storage, and long-term resilience.

Watch intro | Use as question starter

O'AHU 1M 05S

Keoni Navarro

Environmental Data Specialist

I help teams collect and interpret environmental data so communities can make better decisions.

Watch intro | Use as question starter

STEP 5

Ask a Question

Prompt starters reduce intimidation and route questions into a moderated workflow instead of open direct messages.

What should I try in high school if I am curious about this field?

STEP 6

Small Steps

DO NOW

Do Now

- Save the clean energy pathway and one question you still have.
- Watch one Local Voices intro about how math shows up on the job.

What surprised you about this job?

What is one small step I could take this month?

What class, club, or project would help me explore this pathway?

What do students misunderstand about this kind of work?

QUESTION DRAFT

Choose a prompt starter or write your own question.

Send to moderated review

Prompt starter loaded. Students can personalize it before sending.

TRY THIS WEEK

Try This Week

- Ask a counselor or teacher about local STEM or sustainability clubs.
- Bring one question about solar, resilience, or design to class.

EXPLORE NEXT

Explore Next

- Create a mini project comparing two energy-use scenarios for a classroom or household.
- Attend a school, campus, or community event related to sustainability or engineering.
